

In order to help you understand the care we have provided; I have prepared this examination report to address the principal features of your eye health and your vision correction requirements.

DERMATOCHALASIS

Dermatochalasis is the loss of elasticity of the eyelid due to aging. The loose skin of upper lid drapes down over the eye and may block vision. Generally no treatment is necessary, however, surgically removing a portion of the skin to tighten the lid tissue will improve cosmetic appearance and will restore blocked vision.

I hope you have found this report interesting and informative. This personalized report has been motivated by my goal to provide excellence in eye care. I look forward to seeing you for your future eye care needs.
